

I'M-TRAP Intelligent Mosquito Trap

Traps and exterminates flying nuisances quietly, effectively, and hygienically!

I'M Trap Intelligent Mosquito Trap utilizes specially made UV LED beam and high efficient fan to trap and dehydrate flying nuisances quietly, effectively, and hygienically. The built-in UV LED light effectively attracts mosquitoes to get close to the device. When they approach near the windows of light source, the flux of the air flow generating by the high efficient fan will draw them into the compartment and trap them in the collection container. A patented uniquely designed funnel-shaped screen hinders the trapped mosquitoes from flying out even the device is turned off.

The built-in intelligent control system offers three modes of operations:

AUTO mode (device automatically on at the dark time; off during the daytime)

OFF mode (power off)

ON mode (power on for operating all the time)

There is no maintenance, no refill required, just clean the captured insects from the collection container when necessary. **Intelligent Mosquito Trap** creates a mosquito free living space for you by consuming less than only 5 watts of power.

Flying insects affected: mosquitoes, black flies, no-see-ums, biting midges, flying insects, ..,etc.

APPLICATIONS:

- Apartments, houses, supermarkets, basements, garages, restaurants, and any indoor areas
- Patios, porches
- Garden, lawn and yard
- Any places with accessible electricity

OPERATING INSTRUCTIONS:

Please plug the device to a power outlet with the supplied AC adaptor, then adjust the switch to select the desired mode of operation.

AUTO: Night mode, the unit is active in low light levels only

OFF: power off

ON: power on (permanent operation)

While the flying insects trapped are dehydrated and accumulated to a certain quantity, it is recommended to clean the collection container by conducting the following steps.

1. Turn the device to mode OFF, then un-plug the AC Adaptor from the outlet.
2. Hold the main unit with one hand and detach the collection container from the main unit by twisting the bottom portion of the collection container counter-clockwise.
3. Clean the collection container and wash it with a brush if necessary.
4. Dry the collection container and replace it to the main unit properly by holding the main unit by the center portion and turn the bottom collection container clockwise to lock it back in place.
5. Re-plug the device to a power outlet with supplied AC adaptor, and then select the operation mode.

HOW TO OPEN/LOCK THE COLLECTION CONTAINER:

Twist the container counter-clockwise to open.

Twist the container clockwise to lock.

PLEASE NOTE

- Turn off and un-plug the device when it won't be used for a long time.
- Turn off the device when clean the collection container.
- Do not immerse the device in water or any other liquid.
- Do not tamper with the device's internal components.
- When necessary, use a damp cloth to gently wipe the dust off.

SPECIFICATIONS:

Dimensions: 28 cm (H) x 16 cm (Ø)

Weight: approx. 480g (main unit only)

Power supply: switching power supply,

100-240VAC, 60/50Hz; 12VDC 500mA

Power consumption: 5W

Life span of UV LED and fan: up to 50,000 hours
