

Random MOTOR MOLECHASER

STOP IMMUNITY! KEEP BURROWING RODENTS OUT OF YOUR GARDEN FOREVER!

Random MOTOR MOLECHASER utilizes the principle of centrifugal force to create sound and vibration by motor. It is the most effective, humane and environmentally friendly way in keeping gardens and lawns free of destructive ground rodents.

Most underground rodents have poor eyesight but to make up, nature has given them a very acute sense of hearing and sensitivity to ground vibration. Outdoor ants and snakes also sense the ground vibrations as a signal of danger. They move out of to avoid the danger. The **Random MOTOR MOLECHASER** exploits this sensitivity to produce a penetrating sound vibration over an area of approx. 1,500 sq. meters.

Thanks to the improvement of modern technology, the **MOLECHASER** enters the i-generation. With the custom designed ASIC (Application Specific Integrated Circuit) the sound vibration can be generated and emitted from **Random MOTOR MOLECHASER** at the random duration of 1.5 – 3.5 seconds, and the duration of the hibernating (sleeping) intervals can be changed randomly from 15 – 75 seconds. Those field pests won't be able to adapt themselves to the sounds and vibrations created by **Random MOTOR MOLECHASER**. As a result, they move away from the protected area.

Random MOTOR MOLECHASER is of a unique hibernating circuit design. It consumes almost zero power between active intervals. The unit will continuously work for around 10 months on one set of alkaline batteries. The chemical-free **Random MOTOR MOLECHASER** is 100% waterproof and maintenance free. It helps keeping your landscape free of tunneling pests.

Random MOTOR MOLECHASER is completely harmless to worms and other underground bugs.

- MOLECHASER operates in a circular pattern, approx. 45 meters in diameter. This must be an unobstructed 45 meters.
- Place MOLECHASER at site of worst rodent infestation.
- Remove MOLECHASER if ground freezes or when flooding occurs.
- Replace battery after 10 months or when sound is no longer audible.

BURROWING OUTDOOR PESTS AFFECTED:

* Moles * Ground Squirrels * Also, Shrews, Voles, Pocket Mice, Gophers, Ants, Snakes

OPERATING INSTRUCTIONS:

1. To open, unscrew top cover anti-clockwise.
2. Remove battery box and insert 4 x 1.5V alkaline batteries as indicated. If battery installation is correct, you should hear the first vibrating sound within 30 seconds.
3. After ensuring battery installation is correct, replace Battery Box and tighten Top Cover to ensure 100% maximum weather protection.
4. Insert **Random MOTOR MOLECHASER** into the ground up to the Corrugated Portion. Your **Random MOTOR MOLECHASER** will work Day and Night.
5. If you prefer, you may insert the unit all the way into the ground. This will prevent the chance of running over the unit with your lawnmower. If you choose the option, be certain to insert the unit so that the top part of the top cover is flushed with the surface. If you leave it protruding an inch or two it could be a tripping hazard. Be sure to note the location of the unit so it can be easily located in order to replace batteries or remove it for the season.

The unit will work for 10 months on one set of alkaline batteries. To replace batteries, simply repeat steps 1-3. Please note that damaged lawns, shrubs, etc will take up to 6 weeks to rejuvenate. Climate permitting, leave your **Random MOTOR MOLECHASER** in ground to repel new generations of pests.

SPECIFICATIONS:

- Dimensions: 41.5cm (L) x 6.5cm (Diameter)
- Weight: 370 grams w/o battery
- Power Supply: 1.5V (4 x D cell batteries)
- Duration of Interval: 15 – 75 seconds randomly
- Duration of Sound Vibration: 1.5 – 3.5 seconds randomly
- Effective Coverage: within 1500 sq. Meters unobstructed

IMPORTANT:

1. Top cover of MOLECHASER must be tightened again after insertion into the ground so there can be no possibility of water damage.
2. Make a pilot hole before inserting MOLECHASER into hard ground. *DO NOT HAMMER OR PUSH EXCESSIVELY OR YOU MAY DAMAGE UNIT.
3. Range of effectiveness depends largely upon soil type: Dry, sandy, or peat soil does not conduct the sound waves easily and sometimes two MOLECHASERS may be required. Moist clay is the best conductor of sound.
4. Do not expect instant reaction - MOLECHASER must be used continuously for up to 7 days before ground rodents start to move away from the area.
